

leared ML830® Cold Laser

er & its family of products treat Carpal Tunnel
thritis, Muscle & Joint Pain, Stiffness & more!

Deep penetration of approx. 5cm

Reduce Inflammation

Improve Nerve Conduction

World's First FDA-Cleared 3-B Laser

2 Double-Blind Studies

Used In America For Over 16 Years

Patented Technology

Non-Invasive Technology

CONDITIONS THAT MAY BE SUCCESSFULLY TREATED WITH LASER THERAPY INCLUDE:

Low Back Pain, Hip Pain, Mid Back Pain, Neck Pain, Muscle Pain, TMJ Pain, Tendonitis, Sinusitis, Bursitis, Fibromyalgia, Tennis Elbow, Knee Pains, Ankle Pains, Shoulder Pains, Frozen Shoulder, Wrist Pains, Carpal Tunnel Syndrome, Osteo Arthritis, Rheumatoid Arthritis, Post Operative Healing, Repetitive Stress Syndrome, and many other aches and pains.

WHAT TO EXPECT DURING A LASER THERAPY TREATMENT SESSION

For most people, no sensation is noticed at all. You are lying down or sitting and the laser is applied to the area for a few minutes per area. Following, (and even during) a laser therapy session, approximately 75 to 80% of patients being treated can notice an immediate improvement in their condition. This will depend primarily on the type of condition and the length of time the condition has been present.

WHAT TO EXPECT DURING A LASER THERAPY TREATMENT SESSION

Generally, the more chronic (been there a long time) or severe the condition, the longer it takes to respond. The majority of conditions treated will take anywhere from 6 to 12 treatments. Others may take 12 to 24 treatments. Once again, the number of treatments depends on the severity of the condition and the length of time it has been there. There are some conditions that will never completely resolve, but can be helped and maintained with laser therapy. If your condition does not change immediately, it may take a few sessions before a dramatic or marked change is perceived.
